

IFB PACKAGED SOLUTION for Flexible Financial Instruments Accounting

Optimize your accounting for financial instruments in the most effective and flexible way by utilizing ifb's industrialized approach to establish SAP Financial Product Subledger (FPSL) and the Financial Posting Gateway (FPG).

KEY BENEFITS

- › Pre-designed configuration for nine product families to speed up the implementation time
- › Templates and Accelerators to facilitate discussions and document design decisions
- › Proven delivery method which is aligned with the building blocks of the Packaged Solution and the process step model of SAP FPSL/FPG
- › Well-suited for template based national and international role outs
- › Flexible approach to transformation journeys which allows to make maximum re-use of already existing accounting information
- › Foundation configuration for data federation which can be used as a basic example to build additional custom specific reports

KEY FEATURES

- › Support with SAP system installation and business content
- › Info sessions introduce the main concepts of FPSL/FPG and give all answers needed to build a sustainable accounting solution
- › Best practice pre-designed configuration to establish a baseline-subledger within 6-8 weeks
- › Backlog documentation and guided continuous improvement process to include custom deviations from the baseline
- › Support for all integration, acceptance and performance testing
- › End user training
- › Templates for balance initialization and support for the overall migration strategy
- › Four weeks of Hyper-care following the successful go-live of the subledger

Pre-designed configuration for subledger accounting and associated data load procedures

Best practice delivery approach with short time to value

Fixed price offering possible

Highly modular approach that allows for stepwise benefit generation in line with any budget restrictions
