We are looking for a prospective colleague working for our office based in Munich to work as

Senior HANA Developer

We are looking for an experienced HANA developer to help us build-up a new global development unit within the ifb group. The new unit will develop software based on HANA technology for the financial industry and remotely support projects from our office location in Munich. The duration of projects can vary between six month and two years. You will be part of a highly motivated team that is responsible for extending SAP's liquidity and risk management solution, but also for building brand new and innovative software.

Job Duties and Responsibilities will include:

- Performance of project related activities and duties for ifb's development of in-house software and remote project support;
- Develop new software that leverages the potential of SAP HANA in order to complement ifb's implementation-focused consulting portfolio in the financial industry;
- Support the development of the necessary functional specifications to close identified gaps and develop the technical design documents for the configuration and potential software enhancements based on the business requirements and functional design;
- Develop training material and conduct trainings to ensure effective and efficient knowledge transfer to colleagues and our customer's employees in order to enable them to maintain the solution;
- Support of other processes within the organization such as product development, training, marketing, or recruiting;
- Sales support, including support of activities to gain new projects.

Specific Skills:

- More than five (5+) years of software development experience with one or more general purpose programming languages, such as C++, Java, Python, etc. ABAP knowledge is considered a plus.
- More than three (3+) years of experience in SAP HANA development; preferably in the financial industry;
- Deep understanding of HANA architecture and modeler; SAP BI suite and UI5 is considered a plus;
- Strong knowledge of HANA SQL Script;
- Solid foundation in computer science with strong object oriented analysis and design skills;
- Experience in Power Designer and Hadoop is considered a plus;
- Experience in SAP Bank Analyzer is beneficial, but not required;

ifb group
